

DATA ANALYTICS PROCESS

Application in real-life case study scenario

Task: Your task is to give the example(s) of such a real-life situation where we use Data Analytics and link it with the data analytics process. You can prepare a PPT/PDF on a real-life scenario explaining it with the above process (Plan, Prepare, Process, Analyze, Share, Act) and submit it as part of this task.

Example: *Student is selecting college to study*

1. Plan:

Student starts by identifying their career goals and specific areas of courses they are interested in. They can also consider the areas like healthcare, finance, or computer science.

2. Prepare:

Here, student researches colleges that offer strong programs. They look for experienced faculty, modern infrastructure, and relevant resources like labs.

3. Process:

After narrowing down their choices, student begins the application process for selected colleges. It involves gathering required documents submitting them and organising the application data effectively.

4. Analyze:

Student receives acceptance from multiple colleges . now, they need to analyse the criteria, program details , financial and any scholarship. It involves decision making based on thorough analysis.

5. Share:

Student discuss their options with parents, any working employees in family ,mentors or highly educated students or alumni from that selected colleges. By this student gain different perspectives and make a good decision.

6. Act:

Student enrolls in chosen college by taking necessary actions like paperwork etc.
