

# HIRING PROCESS ANALYTICS

Project :4

Name: J.Susritha

Email:susrithaj2102@gmail.com

## Project Description :-

Hiring process is the fundamental and the most important function of a company. Here in this project we get to learn about the hiring trends of the company and draw insights from them.

A brief description of the case study and output required is given below :-

1. How many males and females are Hired ?
2. What is the average salary offered in this company ?
3. Draw the class intervals for salary in the company ?
4. Draw Pie Chart / Bar Graph ( or any other graph ) to show proportion of people working different department ?
5. Represent different post tiers using chart/graph?

## **Approach –**

First , I carried out Exploratory Data Analysis using excel tool. Calculated descriptive statistics on salary offered column. Checked for missing values and outliers using quartile function in excel. After removing the outliers further insights were carried out using excel formulas and graphs.

## **Tech-Stack used –**

We used below mentioned tools to perform the analysis :-

- PPT – To prepare a detailed report on the observations based on the data received.
- EXCEL – Excel was used to perform entire analysis and the questions asked were answered.

# INSIGHTS-

## 1. How many males and females are Hired?

The formula used in excel was as follows :-

=COUNTIFS(D:D,"Male",C:C,"Hired")

=COUNTIFS(D:D,"Female",C:C,"Hired")

=COUNTIFS(D:D,"Male",C:C,"Hired")								
	F	G	H	I	J	K	L	
	c8	56553						
	c5	22075						
	c5	70069						
ent	i4	3207						
ent	i4	29668						
	-	85914				2563	Number of males hired	
	i7	69904				1856	Number of females hired	
	i7	11758						
	i7	11758						

=COUNTIFS(D:D,"Female",C:C,"Hired")								
	F	G	H	K	L			
	c8	56553						
	c5	22075						
	c5	70069						
	i4	3207						
	i4	29668						
	-	85914		2563	Number of males hired			
	i7	69904		1856	Number of females hired			
	i7	11758						

## 2. What is the average salary offered in this company ?

The formula used in excel was as follows :-

=AVERAGE(G2:G7169)

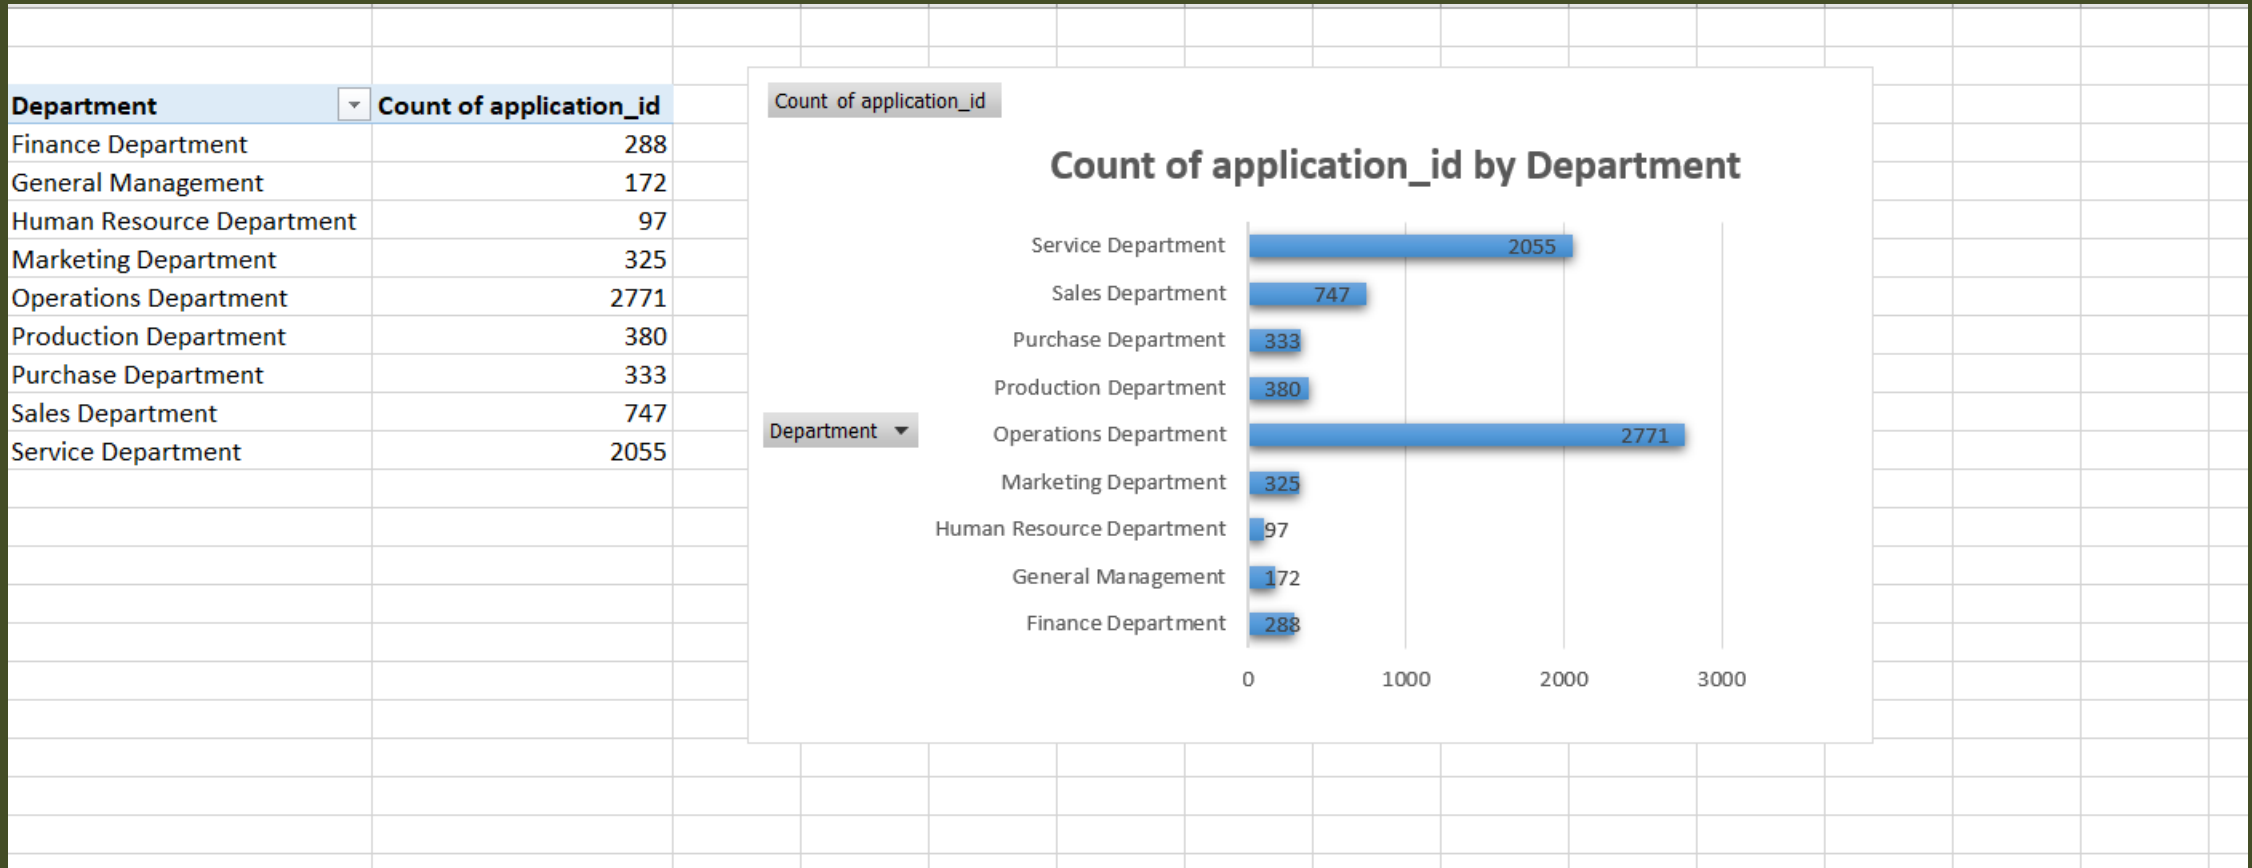

fx					
=AVERAGE(G2:G7169)					
	F	G	H	K	L
c8		56553			
c5		22075			
c5		70069			
i4		3207			
i4		29668			
-		85914			
i7		69904			
i7		11758			
i4		15156			
i4		49515		49983.029	Average salary offered
n10		26990			

3. Draw the class intervals for salary in the company ?

The formula used in excel was as follows :-  
=MAX(G:G)-MIN(G:G)

<i>fx</i>	=MAX(G:G)-MIN(G:G)				
	F	G	H	L	M
c8		56553			
c5		22075			
c5		70069			
i4		3207			
i4		29668			
-		85914		399900	Class Intervals
i7		69904			
i7		11758			
i4		15156			

#### 4. Draw Pie Chart / Bar Graph ( or any other graph ) to show proportion of people working different department ?

## 5. Represent different post tiers using chart/graph?

## RESULTS :-

This project helped me in improving my excel skills and also in understanding of how important Data Analytics is for Hiring Process of an organization as it provides valuable insights such as number of rejections, reason for rejections, profile of applicants, vacancies etc. which helps the hiring department to take Data-Driven Decisions.
